

## Indirect Inlays/Onlays

**Cosmetic dentistry has focused on achieving natural looking dentition that maintains function and strength yet allows natural light transmission.**

Silver colored amalgams or gold restorations have had their place in history in recreating the natural contours and function of posterior teeth.

**Indirect Inlays and onlays fabricated with porcelain or a composite resin provides patients with natural looking esthetic results** and in most cases reinforces tooth structure. Composite resin inlays/onlays are the most popular today because they are kinder to opposing natural dentition than porcelain and once bonded in place their strength compares with porcelain. **Offer that "Perfect Smile" to all your patients with Indirect inlay or onlay restorations!**
