

# Veneers

## *The Conservative Cosmetic Restoration!*

**A Reflection of Mother Nature...**Veneers are a conservative method of treatment for reshaping teeth, diastema closure, chipped teeth, tooth lengthening and color change.

Veneers do not require provisionals in most cases and there is no invasion of tissue which usually means no anesthesia. Hence, they are the ideal treatment plan for patients with healthy teeth and tissue. Veneers can be fabricated from porcelain or resin materials.

A beautiful smile builds self-confidence and... when you look good you feel good! For Maximum Esthetics with Minimal Tooth Reduction prescribe veneers for you next patient and give them "A Perfect Smile"!
